desktop	desktop preset

Standards Alignment Statement

This report aligns findings to WCAG 2.1 Level A and AA (automated checks only), Google Core Web Vitals, and Google Search Essentials.

This audit reflects automated testing only and does not constitute full legal compliance certification.

Limitations & Scope Disclaimer

This report is based on automated Lighthouse checks and reflects a point-in-time snapshot. It does not replace manual testing, user research, or full compliance reviews.

Findings should be validated in real user conditions and with assistive technologies where applicable.

Tested URLs

All URLs included in this audit run.

Executive Summary

What the data shows
What the data shows
- Lighthouse SEO scores are perfect across all tested URLs on both mobile and desktop (average_score = 1.0).
- There are zero SEO audit failures across the dataset (total_failed = 0 for both mobile and desktop; 5 URLs tested).
- All core on-page SEO checks included in the dataset pass consistently: document title, meta description, image alt attributes, link text, robots.txt, canonical, hreflang, crawlable anchors, http status code, and crawlability.

Key strengths
Key strengths
- Consistent pass status across all URLs for critical SEO hygiene items:
- meta-description: pass (5/5)
- document-title: pass (5/5)
- image-alt: pass (5/5)
- link-text and crawlable-anchors: pass (5/5)
- robots-txt and is-crawlable: pass (5/5)
- canonical and hreflang: pass (5/5)
- http-status-code: pass (5/5)
- No variability between mobile and desktop SEO outcomes, indicating stable technical SEO implementation across user agents.

Primary weaknesses
Primary weaknesses
- None are indicated by the provided SEO audit data (0 failed audits and no top_failed_audits).
- Several audits are marked "not_applicable" across all URLs (indexing, structured-data, tap-targets, viewport, plugins, charset). This is not a failure, but it means the dataset does not provide evidence for these areas one way or the other.

High level roadmap
High level roadmap
- Maintain (ongoing): Keep current on-page SEO hygiene stable
- Preserve the passing implementations for titles, descriptions, canonicals, hreflang, alt text, crawlability, and robots.txt across future releases.
- Expand coverage (as needed): Address SEO areas not evaluated as applicable in this dataset
- If relevant to your business goals, implement and validate structured data and indexing-related features outside of this dataset, then re-run Lighthouse to confirm they become applicable and pass.
- Monitoring: Add regression checks
- Continue automated Lighthouse runs to detect any future drift from the current perfect pass state.

What the data shows
What the data shows
- Mobile SEO summary: average_score 1.0; passed 10; failed 0; not_applicable 6; total_audits 16.
- Desktop SEO summary: average_score 1.0; passed 10; failed 0; not_applicable 6; total_audits 16.
- All applicable audits in the dataset are marked as pass; remaining items are not applicable.

Key strengths
Key strengths
- Passes key SEO checks on both mobile and desktop:
- document-title, meta-description, canonical, hreflang
- robots-txt, is-crawlable, http-status-code
- image-alt, link-text, crawlable-anchors

Primary weaknesses
Primary weaknesses
- No failures are reported in the provided Lighthouse SEO audits for this URL.
- Several items are not applicable (indexing, structured-data, tap-targets, viewport, plugins, charset), so the dataset does not provide validation signals for those areas.

Recommendations
Recommendations
- Maintain current passing SEO implementations (titles, descriptions, canonicals, hreflang, alt text, crawlability) to avoid regressions.
- If structured data or explicit indexing validation becomes a priority, implement and re-test so these areas become applicable and can be measured.
